

Name: Lexin Li
Gender: Male
Citizenship: China
Visa: F-1 International student

School: University of San Francisco
Major: Economics, Master of Art
Skills: Python, Data analyzing, Stata, Econometrics
OPT: From July 22nd 2017

Thanks for reading this curriculum vitae, Here is a freshman graduated from University of San Francisco who wants to find a job as a data analyst. Though I got the degree in economics, I found that it is fun to deal the data with Python. I had a course about analyzing financial data with anaconda and other tools, which made me want to become a data scientist. But limited by the knowledge and experience, I need a easier job to start with.

Personality

Let me introduce you myself in detail. I was a band member in university, when I was an undergraduate. I play the violin, and we presented many time at galas of other schools (not that professional), without sponsor and professional guidance, we faced, and solved many problems as a band. I really learned team work from my members.

And I am a leader of the debate team in physics school (I was a physics student in the first year), I lead that team for four years, Even though I changed my major, It was never broken off. The debate team is a place where people compete, so making every member feel comfort is the key to strengthen it, I got some about that; as well, talking makes me feel good.

Education

I am not a kind of top student in university, But I focus on understanding and using the knowledge learned. For now I can use Stata to do data analyzing skillfully, and know more about how every command work and the arithmetic behind. To me Python is a new tool, but I can use it to do data visualization, classification and some machine learning job. Here is my git-hub URL:

<https://github.com/lessdaa/project2.git>

(Project 2 is the final exam of the financial econometric course)

Other things

I aimed to be a data scientist, which is new and rare in China, so I decided not to fly back so soon, which means I really need H-1b Visa, and I know that may costs some money. So I don't expect my first job is well paid. On the other hand, I wish I could get a place, where I can really learn in a group.

As a freshman I am, if you are interested in hiring me, or you have any question about me , please contact me.

Thanks again for reading this!
